

Industrial Rotary Cutter with Tongs

This machine is a specialized industrial cutter designed for precision cutting and shaping of materials. It features a cylindrical cutting head with multiple blades and includes tongs for material handling during the cutting process.

Product Overview

Industrial Rotary Cutter with Tongs

This specialized industrial rotary cutter is engineered for precision cutting and shaping of materials in demanding production environments. Featuring a robust cylindrical cutting head with multiple edges, it delivers consistent rotary cutting action. The unit is integrated into a secure cabinet base that houses the motor and control systems, while the included tongs facilitate safe and efficient material handling during operation.

Technical Specifications

Cutting Mechanism	Rotary cutting head with multiple blades
Material Handling	Integrated Tongs, Material Support

Control & Operation

Control Panel Location	Left side mounted
------------------------	-------------------

Construction

Base Type	Cabinet base housing motor and control systems
