

Industrial Rotation Speed Governor

This industrial speed governor precisely controls the rotational speed of machinery. It features a robust mechanical assembly with a control panel for electronic adjustments.

Overview

Industrial Rotation Speed Governor

This high-performance industrial rotation speed governor is designed for precise mechanical speed control in heavy-duty machinery. It features a self-automatic aeration system, eliminating the need for any additional external aeration equipment. Engineered for reliability, this unit ensures accurate speed regulation and includes manual adjustment capabilities for integration into complex automated control systems.

Technical Specifications

Torque Capacity Range

1500 N.m
Minimum Torque

18000 N.m
Maximum Torque

Aeration System

Self-automatic aeration

Maintenance

No additional aeration required, Low maintenance
