

Industrial Screw Chiller

This industrial screw chiller is designed for efficient cooling in various applications. It features a robust screw compressor, providing reliable and consistent performance.

Overview

Industrial Screw Chiller Overview

This industrial-grade flooded screw chiller is engineered for high-performance cooling in demanding environments. Equipped with a European-manufactured compressor and a high-duty heat exchanger, the unit delivers reliable cooling capacity that adjusts automatically based on real-time load requirements. Its integrated microcomputer control system and touch-interactive interface ensure precise temperature management and effortless operation for professional industrial applications.

Technical Features

Compressor Technology	Flooded Screw Compressor
Component Sourcing	European Compressor, Imported Controls

Control System

Automation Capabilities

- Full-auto microcomputer control
- Automatic cooling capacity adjustment
- Real-time load sensing

Operating Interface	Touch-interactive display
---------------------	---------------------------

Performance

Performance Efficiency

High-duty heat exchanger • Energy efficient • Automatic load balancing
