

Industrial Servo Drive for Automation

This high-performance servo drive is designed for industrial automation applications. It provides precise motor control with advanced features for positioning, speed, and torque control.

Product Overview

Industrial Servo Automation Solutions

This industrial servo drive is engineered for high-performance automation applications, providing precise control over motor positioning, speed, and torque. It is designed for seamless integration into complex control systems, offering robust diagnostic capabilities and safety features to ensure reliable operation in demanding environments. This versatile unit supports a wide array of industrial components, making it an essential solution for modern automated machinery.

Compatibility & Support

Automation Component Range

Component Category	Function
Servo Motors	Motion Control
Servo Encoders	Feedback & Positioning
Servo Amplifiers	Signal Processing
Servo Valves	Hydraulic Control
Servo Cables	Connectivity

Supported Component Types

Servo Motors, Servo Encoders, Servo Transformers, Servo Cables, Servo Valves, Servo Amplifiers, Servo Drives, Servo Actuators
