

Industrial Sewing Machine for Garments and Shoes

This industrial sewing machine is designed for garment, shoes, and accessories manufacturing. It features adjustable settings for various fabric types and thicknesses, along with multiple thread spools for complex stitching.

Overview

Industrial Sewing Machine

This industrial sewing machine is engineered for high-volume manufacturing of garments, footwear, and accessories. Built for continuous operation, it features precision stitching mechanisms and robust construction to handle a variety of fabric types and thicknesses. With adjustable settings and multi-spool capability, it is designed to support both mass production and specialized, complex sewing applications.

Technical Specifications

Key Operational Features

- Robust construction for continuous operation
- Precision stitching mechanisms
- Adjustable settings for fabric thickness
- Multiple thread spools and guides

Model Number	TY-GN6000/700
Primary Applications	Garment Manufacturing, Footwear Production, Accessories Assembly

Performance Metrics

Production Suitability

Mass Production • Specialized Sewing
