

Industrial Sewing Machine Head for Garments and Shoes

This industrial sewing machine head is designed for heavy-duty stitching in garment and shoe manufacturing. Its robust construction ensures precise and reliable operation for seaming, hemming, and decorative stitching.

Product Overview

Industrial Sewing Machine Head

This industrial sewing machine head is engineered for heavy-duty stitching applications in the garment, shoe, and accessory manufacturing industries. Featuring a robust design with a precision needle, presser foot, and feed dog mechanism, it ensures reliable and consistent performance. The machine is versatile enough for various tasks including seaming, hemming, and decorative stitching, while maintaining compatibility with diverse materials such as leather, fabric, and synthetics.

Technical Features

Material Compatibility

- Leather
- Fabric
- Synthetics

Key Performance Benefits

Heavy-duty construction • Consistent stitch quality • Reduced downtime • Precision engineering

Stitching Applications

Seaming, Hemming, Decorative Stitching
