

Industrial Slitter Knives for Metal Cutting

These slitter knives are designed for industrial cutting applications requiring precision. They offer sharp cutting performance and high wear resistance.

Product Overview

Industrial Slitter Knives

These industrial slitter knives are engineered for high-performance metal cutting applications. Each knife undergoes precision heat treatment to achieve a uniform, durable cutting edge that maintains consistency during high-speed operations. Built from high-quality solid and high-speed steel, they provide the shear strength and dimensional accuracy necessary for demanding industrial environments.

Technical Specifications

Key Performance Features

- Uniform cutting edge
- High shear strength
- High dimensional accuracy
- Suitable for high-speed operations
- Enhanced wear resistance

Materials Available

Solid Steel, High Speed Steel

Application Details

Usage Context

Industrial metal slitting operations across various material types.
