

Industrial Spraying and Spreading Equipment

This spraying and spreading equipment is designed for industrial applications. The unit features a high-capacity tank and multiple outlets for efficient spraying and spreading of various materials.

Product Overview

Industrial Performance

The JKA20 industrial spraying and spreading system is engineered for high-demand applications in construction, agriculture, and manufacturing. Its robust construction ensures long-term durability, while the high-capacity tank design allows for extended operation periods without frequent refills. Featuring multiple high-efficiency outlets, this equipment provides consistent and versatile coverage for various industrial materials.

Technical Specifications

Key Features

- Robust construction for industrial durability
- High-capacity reservoir
- Multi-outlet spray and spread system

Model Designation	JKA20
Suitable Applications	Construction, Agriculture, Manufacturing
