

# Industrial Spraying and Spreading Equipment

This spraying and spreading equipment is suitable for various industrial applications. It features a twin-cylinder compressor, pressure gauges, air regulators, and safety valves for efficient and safe operation.

## Product Overview

### Industrial Spraying and Spreading Solution

The JYK20 is a professional-grade spraying and spreading machine engineered for versatile industrial applications. It features a compact, robust design centered around a vertically oriented air tank and a high-performance twin-cylinder compressor. Equipped with integrated pressure gauges, precision regulators, and essential safety valves, this system ensures reliable and efficient operation in demanding industrial work environments.

## Technical Specifications

Tank Orientation	Vertical
Compressor Configuration	Twin-cylinder

## Operational Controls

### Integrated Control Components

- Pressure gauges
- Air pressure regulators
- Safety relief valves

### Operational Efficiency

**2 count**

Compressor Cylinders

## Compliance and Quality

Construction Standards	Industrial Grade, Robust Design, High Durability
