Product Overview

Industrial Power Transmission

This industrial-grade sprocket is engineered for reliable rotational motion transfer across a wide variety of equipment and machinery. Featuring a robust, precision-machined design, it ensures optimal chain engagement and minimized wear during demanding operational cycles. The product is available in multiple material specifications to suit specific environmental requirements and can be custom-sized to meet precise mechanical equipment demands.

Technical Specifications

Key Features

- Hardened surface for extended service life
- Precision-machined teeth
- Optimized for smooth chain engagement
- Versatile shaft mounting configuration

Material Composition

C45 Steel, Stainless Steel

Customization

Yes
