

Industrial Take-Up Stand for Material Tension Control

This heavy-duty take-up stand is designed for industrial applications. It provides reliable support and precise tension control for various materials during manufacturing processes.

Product Overview

Industrial Take-Up Stand

This heavy-duty take-up stand is engineered for precise material tension control in demanding industrial manufacturing environments. Constructed with high-strength steel and a stable base, it ensures minimal vibration and maximum operational stability. It features adjustable mechanisms to accommodate varying material widths and tensions, finished with a durable coating to resist corrosion and wear.

Technical Specifications

Key Features

- Adjustable tension control mechanism
- Variable material width accommodation
- Corrosion-resistant finish
- Vibration-dampened stable base

Construction Material	High-strength steel
Industry Applications	Wire Processing, Cable Manufacturing
