

Industrial Textile Dyeing Machine with Filtration

This industrial textile dyeing machine processes materials within a large cylindrical vessel. It includes a separate filtration unit for purifying liquids used during manufacturing.

Product Overview

Industrial Textile Dyeing and Filtration System

This industrial-grade textile processing unit is designed to handle demanding dyeing and treatment tasks with high efficiency. It features a robust cylindrical vessel equipped with a powerful motor-driven mixing mechanism, ensuring consistent material processing. Integrated with a specialized filtration system, the unit allows for precise purification and treatment of process liquids, making it an essential component for high-quality textile manufacturing workflows.

Technical Specifications

System Components

- Large cylindrical vessel
- Hinged loading lid
- Motor-driven mixing mechanism
- Integrated liquid filtration unit
- Reinforced structural frame

Primary Process

Textile Dyeing • Liquid Purification

Construction

Industrial Grade, Durable Build
