

Industrial Timing Control Relays

These timing control relays are designed for industrial automation, offering precise control over timing functions. Available in analog and digital models, they cater to a wide range of control and automation requirements.

Product Overview

Industrial Timing Control Solutions

These industrial timing control relays are engineered for precision in diverse automation and control applications. The series includes a comprehensive range of both analog and digital models designed to meet rigorous industrial standards. With versatile configurations and multiple timing functions, these units provide reliable performance for complex control systems requiring exact temporal accuracy.

Available Models

Supported Series

AH3, ST2P, ST3P, ST4P, H3BA, H3CR-A8, ASTP-N, AH2-N, ATDN-Y, ASY-3D, H3Y-(ST6P), AH48L

Performance Specifications

Timing Characteristics

- Multiple timing functions available
- Analog and digital interface options
- High-precision industrial timing control
- Robust configuration for automation environments
