

Industrial Turbine and Generator Component

Component is suitable for gas turbine, steam turbine, and generator applications. These components have been used in more than 6000 units over the past 20 years.

Product Overview

High-Performance Energy Components

These industrial-grade components are engineered for gas turbines, steam turbines, and power generation systems. Designed for durability and precision, they are suitable for demanding high-pressure and high-volume operational environments. With over 20 years of manufacturing excellence, these parts integrate seamlessly into complex energy infrastructure.

Manufacturing Capabilities

Production Processes

- Foundry (Iron & Steel Casting)
- Fabrication (CS & SS Welding)
- Precision Machining (Large, Medium, Small Parts)
- Fitting, Assembly & Testing

Production History

6000 units
Units Delivered

20 years
Years Experience

Technical Specifications

Compatible Systems

Gas Turbines • Steam Turbines • Power Generators • Module Skids

Material Composition

Cast Iron, Cast Steel, Carbon Steel, Stainless Steel
