

Industrial Vacuum Pump

This vacuum pump provides pulsation-free discharge with a higher pressure ratio. Its design ensures cooler running bearings and minimal maintenance.

Overview

Industrial Vacuum Pump Solution

This industrial vacuum pump is engineered for high-performance applications requiring consistent and reliable vacuum pressure. Featuring a robust, dust-proofed shaft seal and dynamic balancing technology, the unit ensures long-term operational durability even in challenging environments. The centrifugal compressor design delivers a steady, non-pulsating airflow suitable for demanding tasks such as pneumatic conveying, packaging, and vacuum hold-down operations.

Technical Specifications

Operational Benefits

- Directly connected motor shaft-impeller for reliability
- Centrifugal compressor design
- Continuous high-pressure airflow generation
- Bearing protection from contaminated air streams

Design & Build

Low Noise, Low Vibration, Dust-proofed, Dynamic Balancing
