

Industrial Valve Actuator Assembly

This industrial valve actuator assembly is built for heavy-duty applications. It features a cast metal construction with a flanged base and a spring-loaded mechanism for controlling valve position.

Overview

Industrial Valve Actuator Assembly

This industrial valve actuator assembly is engineered for heavy-duty applications, providing reliable mechanical control for valve positioning in pipelines and industrial machinery. Featuring a robust cast metal construction, the unit is designed for secure mounting via a flanged base. Its integrated spring-loaded mechanism and linkage system ensure precise operation in demanding industrial environments.

Technical Specifications

Material Grades	A105, WCB
Construction	Cast metal construction
Mounting	Flanged base
Actuation System	Mechanical spring-loaded linkage
