

Industrial Valve Group Assembly

This valve group assembly is designed for pressure regulation and fluid control. It integrates a gate valve, Y-strainer, pressure reducing valve, pressure gauge, and flanged ball valve with interconnecting fittings.

Product Overview

Industrial Valve Group Assembly

This comprehensive industrial valve group assembly is engineered for precise fluid control and pressure regulation in complex piping systems. The integrated unit features a robust combination of a gate valve, Y-strainer, pressure reducing valve, and a flanged ball valve to ensure operational safety and efficiency. Built with durable components and standard connectivity, this solution is designed to meet the rigorous demands of professional industrial applications.

Technical Specifications

Integrated Components

- Gate valve with handwheel actuator
- Y-strainer with threaded cap
- Pressure reducing valve with bonnet
- Pressure gauge with needle indicator
- Flanged ball valve

Nominal Diameter

DN15

Fittings

Flanges, Nipples, Couplings

Model Identifier

32
