

Industrial Ventilation Fan with Filter

This ventilation fan assembly is designed for industrial and commercial settings. It provides efficient air circulation and filtration with a protective grille and filter.

Product Overview

Industrial Ventilation and Filtration System

This industrial ventilation fan assembly is engineered for high-efficiency air circulation and dust filtration in demanding commercial and manufacturing environments. The unit features a robust square frame design with an integrated protective grille and circular fan guard to ensure operational safety. Designed for reliability, this system effectively manages airflow while trapping airborne debris, making it an essential component for maintaining clean and regulated industrial machinery conditions.

Technical Specifications

Primary Application

Industrial Ventilation • Machinery Cooling • Air Filtration

Component Type

Ventilation and Exhaust Fan Assembly

Design Features

Square Frame, Protective Grille, Circular Fan Guard, Integrated Filter
