

Industrial Vibrating Screen for Material Separation

This industrial vibrating screen efficiently separates materials using multiple tiered screening decks. Its heavy-duty steel construction and vibrating mechanism ensure consistent performance in demanding environments.

Product Overview

Industrial Material Separation

This industrial vibrating screen series is engineered for high-performance screening, grading, and classification of loose minerals and rocks. Designed for durability in demanding mining and construction environments, it supports both dry and wet screening processes. With its robust structure, the system offers high screening efficiency and large capacity to ensure consistent throughput for high-volume processing applications.

Quality Standards

ISO 9001, CE, BUREAU VERITAS, TÜV Rheinland

Technical Specifications

Compatible Series

- YA Series
- YKR Series
- ZKR Series

Operational Modes

Dry Screening, Wet Screening, Dehydration, Desliming

Screening Configuration

Supports one, two, three, or multi-layer vibrating screen configurations to meet specific operational requirements.

Industry Applications

Primary Industries

- Mining
- Construction
- Building Materials
- Quarrying
- Recycling
