

Industrial Wastewater Treatment System

This system is designed for advanced sewage treatment in industrial settings. It features a horizontal vessel with support structures and integrated piping for wastewater processing.

System Overview

Industrial-Grade Wastewater Solution

This industrial wastewater treatment system is engineered for large-scale sewage processing applications. Designed for maximum efficiency, the system utilizes a robust horizontal vessel configuration to manage high-volume wastewater workflows. Its integrated piping and support structure ensure reliable performance for complex water processing engineering projects.

Technical Specifications

Vessel Orientation	Horizontal
Primary Application	Industrial Sewage, Wastewater Treatment, Large-scale Processing

System Features

Core System Capabilities

- Heavy-duty horizontal vessel design
- Integrated piping for high-flow capacity
- Engineered support framework for stability
- Optimized for professional engineering projects
