

Industrial Water Chiller Unit

This industrial water chiller unit is designed for cooling applications within industrial environments. It features a robust construction with a cylindrical vessel and a control panel.

Product Overview

High-Performance Industrial Cooling

This industrial water chiller unit is engineered for demanding cooling applications in professional settings. Featuring a robust design with a large cylindrical evaporator or condenser, the system is built onto a sturdy metal frame for long-term durability. The integrated control panel and accessible connection points ensure streamlined operation and maintenance for industrial processes.

Design & Construction

Build Quality

- Heavy-duty metal support frame
- Large-scale cylindrical heat exchanger vessel
- Integrated control system with digital display
- Industrial-grade piping and electrical connection points

Technical Features

Control System

Digital Display • Electronic Control Panel • Industrial Interface

Primary Application

Industrial Cooling
