

Industrial Water-Cooled Screw Chiller

This water-cooled screw chiller is designed for industrial cooling applications. It features a screw compressor, an advanced control system, and optimized heat exchangers.

Overview

Industrial Efficiency

This water-cooled screw chiller is engineered for high-performance industrial cooling and heating applications. It utilizes R134a refrigerant combined with a closed shell and tube condenser to ensure superior heat exchange efficiency. Designed for demanding environments, this unit provides reliable, precise temperature control to optimize your industrial cooling processes.

Performance Metrics

Cooling Capacity

800 KW

Total Cooling Capacity

Technical Specifications

Refrigerant Type	R134a
Condenser Type	Closed shell and tube

Operational Features

System Capabilities	Cooling, Heating, Industrial Grade
