

Industrial Water Cooling Chiller

This industrial water chiller is designed for precise temperature control in various applications. The robust unit features durable construction, insulated panels, multiple pressure gauges, a digital control panel, and heavy-duty casters for mobility.

Product Overview

Industrial Temperature Control

This water cooling chiller provides precise temperature management to enhance production efficiency and quality across diverse industrial sectors. Its rational design and simple operation make it an essential support machine for modern manufacturing environments. Engineered for reliability, it maintains optimal refrigeration efficiency regardless of ambient conditions when paired with a cooling tower.

Key Features

Compliance

CE Certified

Design Specifications

- Electrostatic spray powder shell
- European design
- Durable insulated construction
- Digital control panel
- Heavy-duty mobility casters

Applications

Applicable Industries

Plastic Injection, Leather Processing, Surface Treatment, Pharmaceutical, Chemical, Hydraulic Systems, Laser Technology, Shoe-making, Electronics, Printing

Technical Details

System Monitoring

- Integrated pressure gauges
- Digital parameter interface

Operational Requirement

Requires external cooling tower for operation
