

Industrial Water Filtration System

This robust stainless steel industrial water filtration system is designed for efficient removal of impurities. The system features a cylindrical tank with multiple inlet and outlet pipes, a pressure gauge for monitoring performance, and sturdy legs for stable support.

Overview

Industrial Water Filtration System

This robust industrial water filtration system is engineered for the efficient removal of impurities from water supplies. Constructed with high-quality stainless steel, it ensures durability and long-term performance in demanding environments. The unit includes an integrated pressure gauge for real-time performance monitoring and is supported by a sturdy base for stability, making it an ideal solution for various industrial water treatment applications.

Technical Specifications

Design Features

- Cylindrical tank design
- Multiple inlet/outlet ports
- Sturdy support legs

Material	Stainless Steel
Filter Media Type	Quartz Sand (石英砂)
Monitoring	Pressure Gauge, Inlet/Outlet Monitoring
