

Industrial Water Filtration Tank

This vertical, cylindrical tank is engineered for industrial water filtration processes. It is designed to hold and process liquids under pressure, ensuring efficient water treatment.

Product Overview

Industrial Water Filtration Tank

This industrial-grade vertical cylindrical tank is expertly engineered for high-performance water purification and liquid processing tasks. Featuring a robust, pressure-ready design with a durable gray finish, it provides reliable containment and processing capabilities for demanding industrial environments. The unit includes multiple strategically placed ports to facilitate seamless integration into existing fluid management systems.

Technical Specifications

Design Features

- Pressure-resistant construction
- Vertical orientation
- Multi-port configuration
- Corrosion-resistant gray finish

Vessel Type	Vertical Cylindrical Tank
Primary Applications	Water Purification, Liquid Filtration, Industrial Processing
