

Industrial Water Filtration Tank

This vertical tank is designed for industrial water filtration and purification processes. Its metal construction features multiple ports for efficient fluid transfer within a water treatment system.

Overview

Industrial Water Filtration Tank

This industrial-grade cylindrical tank is engineered for high-performance water purification and complex fluid filtration processes. Its robust vertical design facilitates efficient fluid management, while the multiple port configurations allow for seamless integration into existing industrial piping systems. Designed for durability and operational reliability, this tank serves as a critical component in demanding liquid processing environments.

Technical Specifications

System Integration

- Multi-port fluid transfer
- Vertical inlet/outlet configuration
- Industrial standardized fittings

Design Structure	Vertical cylindrical configuration
Material Finish	Industrial Grade, Matte Finish, Reinforced Steel

Performance

Typical Applications

Water Purification • Industrial Filtration • Fluid Processing
