

Industrial Water Purification System

This stainless steel water purification system is designed for industrial applications. The filtration unit features a cylindrical tank with multiple ports and connections for inlet and outlet water flow.

Product Overview

Industrial Purification Solution

This industrial water purification system is engineered for high-performance filtration and water treatment processes. Featuring a robust stainless steel construction, the unit ensures long-term durability and resistance in demanding industrial environments. It is equipped with precision pressure gauges and strategically placed inlet and outlet ports to allow for seamless integration and real-time performance monitoring.

Technical Specifications

Material	Stainless steel
Base Configuration	Three-legged base
Key Features	Integrated pressure monitoring, Multi-port connectivity, Corrosion resistant, Industrial grade

Application

Core Applications

- Water filtration
- Industrial water purification
- Water processing
