

Industrial Welding Machine

This heavy-duty welding machine is designed for industrial applications. It features adjustable controls, robust construction, and portability with integrated wheels, making it suitable for a variety of welding tasks.

Product Overview

Heavy-Duty Industrial Performance

This industrial welding machine is engineered for demanding professional environments requiring high power output and reliability. Featuring a robust thyristor-based design, it ensures stable arc characteristics for consistent weld quality across a variety of heavy-duty applications. Its integrated wheel system provides essential portability, allowing for easy maneuverability across workshop floors.

Technical Specifications

Maximum Output

630 A

Max Output Current

Technology

Thyristor

Model Number

ZX5-630

Features

Key Features

- Adjustable controls
- Robust industrial construction
- Integrated wheels for portability
- Stable arc characteristics
