

Industrial Welding Machine

This heavy-duty welding machine is designed for industrial applications. It features digital displays for precise control, multiple output terminals for various welding processes, and a robust chassis with wheels for mobility.

Product Overview

Industrial Welding Power Source

This heavy-duty welding machine is engineered specifically for demanding industrial applications requiring high power and consistent reliability. It features advanced digital displays for precise operational control and is built with a robust, mobile chassis for ease of movement across shop floors. Designed to support multiple welding processes, it serves as a versatile tool for professionals tackling high-intensity fabrication tasks.

Technical Specifications

Core Metrics

630 A

Output Capacity

Model

ZX7-630

Features

Design Advantages

- Digital display for precise parameter monitoring
- Multiple output terminals for process flexibility
- Robust heavy-duty chassis
- Integrated wheels for workshop portability

Key Capabilities

Industrial Grade, Digital Control, High Mobility, Multi-Process Support
