

Industrial Welding Machine 80-400A

This welding machine is designed for industrial applications. It features adjustable current settings ranging from 80 to 400 amps and is equipped with a manual crank for precise current control.

Product Overview

Industrial Welding Power

The BXI-500-2 is a robust welding solution engineered for demanding industrial environments. It provides high-performance welding capabilities with a wide current adjustment range, ensuring versatility for various metal joining tasks. Designed for reliability and ease of use, this unit features a portable wheeled chassis and intuitive manual controls.

Technical Specifications

Welding Current

80 A

Minimum Current

400 A

Maximum Current

Control Mechanism

Manual Crank

Design and Portability

Mobility

Wheeled Base, Easy Maneuverability

Construction

Robust industrial-grade housing for high-demand environments
