

Industrial Welding Rectifier

This welding rectifier is designed for industrial applications, providing stable and reliable power output. The unit features multiple adjustable modules housed in a robust cabinet with lifting points for easy transportation.

Overview

Industrial Welding Rectifier

The ZXE1-500 is a robust industrial welding rectifier engineered for demanding professional applications. Designed for stability and reliability, it provides consistent power output necessary for high-quality welding tasks. The unit is built with a durable cabinet and lifting points, ensuring it can be easily transported and deployed across various industrial job sites.
