

Industrial Wireless Remote Control System

This industrial wireless remote control system allows for remote operation of machinery. It consists of a handheld transmitter with multiple control buttons and a receiver unit for integration.

Product Overview

Industrial Wireless Control

This industrial wireless remote control system is designed to provide safe and efficient operation of heavy machinery and electrical equipment. The system comprises a robust handheld transmitter equipped with multiple control buttons and a dedicated emergency stop mechanism for enhanced safety. The receiver unit is built with a durable enclosure, allowing for seamless integration into existing industrial setups.

System Configuration

Included Components

- Handheld transmitter
- Receiver unit

Safety Features

Emergency Stop Button, Wireless Operation

Technical Details

Primary Application

Industrial machinery and electrical equipment control
