

Industrial Y Strainer Filter with Flanged Connections

This industrial Y strainer filter is designed for removing debris and particles from liquid flow lines. It features flanged connections, pressure gauges, and a blow-off valve.

Product Overview

Industrial Y Strainer Filtration System

This industrial Y-strainer filter is engineered for the efficient removal of debris and particulates from liquid flow lines. Designed for durability and operational visibility, the unit features robust construction paired with integrated pressure gauges for real-time monitoring of pressure drop. The inclusion of a blow-off valve facilitates efficient maintenance and cleaning, ensuring consistent performance in demanding industrial environments.

Technical Specifications

Connection Type	Flanged
Filter Type	Y-Strainer

Key Features

Applications

- Liquid flow lines
- Industrial filtration systems
- Debris and particle removal

Monitoring	Pressure Gauges, Blow-off Valve
