

# Infrared Radiant Heater for Indoor Use

This infrared radiant heater is designed for indoor use. It features a cylindrical design with a reflective grid for directional heating and a stable circular base.

## Product Overview

### Efficient Indoor Heating Solution

This infrared radiant heater is engineered for effective indoor climate control, utilizing advanced radiant technology to provide immediate, directional warmth. Its cylindrical design ensures even heat distribution, while the robust reflective grid optimizes thermal output. Built with safety and stability in mind, it features a weighted circular base to prevent tipping, making it a reliable choice for professional indoor environments.

## Design & Build

### Safety Features

Stable Circular Base • Anti-Tip Design

Design Style	Cylindrical
