

Infrared Shrink Packaging Machine

This machine efficiently shrinks packaging films using infrared technology. It features adjustable temperature and conveyor speed to accommodate various product sizes and packaging materials, ensuring a tight and professional finish.

Overview

Advanced Shrink Packaging Solution

This far infra-red shrink packaging machine is designed for high-efficiency, continuous shrink wrapping operations. By utilizing advanced heating technology and a fully enclosed hot-air circulation unit, it ensures uniform film shrinking, enhancing both the aesthetic appeal and protection of your products. It is an ideal solution for securing multi-item groups and tray packaging, offering moisture resistance and shock protection.

Technical Specifications

Model Number	PE5540
Transmission Bandwidth	55 cm
Conveyor Speed	0-10 m/min
Max Load Capacity	40 kg

Power and Heating

Heating Configuration

26 pcs Total Heating Tubes	500 w Power per Tube
--------------------------------------	--------------------------------

Heating Tube Distribution

Position	Count
Above	8
Below	8
Sideways	10

Power Supply	380V, three-phase four-wire system
Total Power	13 kw

Key Features

Key Features	Energy Efficient, Automatic Continuous Operation, Hot-air Circulation, Electronic Governor Motor, Moisture Resistant
