

Infusion System with Tubing and Connectors

This infusion system features tubing and connectors for administering fluids. It is designed for precise and controlled fluid delivery in medical environments.

Overview

Precision Infusion System

This medical-grade infusion system is engineered for precise and controlled fluid administration in clinical settings. The assembly includes high-quality tubing and specialized connectors designed to ensure seamless fluid pathways. Its clear, sterile-focused construction allows for easy monitoring of fluid flow, making it a reliable choice for professional medical environments.

System Components

Included Components

- Medical-grade tubing
- Specialized connectors
- Control device interface

Compliance & Quality

Design Features

Sterile Design, High Visibility, Precision Flow

Application

Primary Application

Medical fluid administration and infusion therapy
