

Injection Mold for Plastic Parts

This injection mold is engineered for the production of plastic parts. It features a multi-cavity design and integrated cooling channels.

Product Overview

Precision Injection Mold

This precision-engineered injection mold is designed for the efficient manufacturing of plastic parts. Featuring a multi-cavity design, it enhances production throughput while maintaining high consistency. Constructed from high-grade tool steel, the mold ensures long-term durability and reliability in industrial environments.

Technical Features

Material	High-grade tool steel
Design Configuration	Multi-cavity
Thermal Management	Yes
Ejection System	Integrated ejector pins

Compatibility

Compatibility	Standard injection molding machines
