

Injection Mold for Syringes and Medical Tubes

This injection mold is designed for manufacturing syringes and PET testing tubes. It is engineered for optimal performance and durability in high-volume production environments to ensure consistent part quality.

Product Overview

Precision Medical Injection Molds

This high-precision injection mold is engineered specifically for the manufacturing of syringes, PET testing tubes, and various critical medical components. Designed for high-volume production environments, the tool ensures consistent part quality and exceptional durability. The robust construction utilizes premium materials, making it a reliable solution for demanding medical molding applications requiring strict quality standards.

Manufacturing Standards

Quality Management

- ERP system integration
- Standardized process management
- In-house testing center
- Dedicated R&D team

Certifications

ISO 9001:2008

Technical Capabilities

Application Scope

Syringes • PET Testing Tubes • Medical Components • Precision Spare Parts

Core Services

- Advanced mold design
- Precision manufacturing
- Technical support and consulting
- Continuous process improvement
