

# Injection Mold for Washing Machine Components

High-precision injection mold designed for manufacturing washing machine components. Constructed from durable tool steel, this mold ensures consistent part production with tight tolerances and excellent surface finish.

## Product Overview

### High-Precision Manufacturing Solution

This high-precision injection mold is engineered specifically for the efficient production of washing machine components. Constructed from durable, high-grade tool steel, it ensures consistent part quality with tight tolerances and superior surface finishes. Designed for high-volume manufacturing, the mold integrates advanced cooling systems and reliable ejection mechanisms to maximize throughput and operational longevity.

## Technical Specifications

Material Composition	High-grade tool steel
Core Features	Advanced cooling channels, Ejector pin system, Robust alignment mechanisms, High-volume compatible

## Performance Metrics

### Operational Efficiency

**510 id**

Maximum Model Series Capacity

## Manufacturing Data
