

Injection Molding Machine

The injection molding machine is a robust solution for high-volume plastic part production. It features a high-performance hydraulic system for precise control and consistent molding.

Overview

High-Performance Injection Molding Solution

This injection molding machine is engineered for high-volume plastic part production, offering a robust and efficient solution for demanding industrial environments. It integrates a high-performance hydraulic system that ensures precise control and consistent molding results across every cycle. With advanced programming capabilities and energy-saving technology, this machine is designed to maximize reliability and operational longevity.

Performance Metrics

Injection Pressure

1100 T

Clamping Force

Key Features

Core Capabilities

- High-performance hydraulic system
- Advanced process control and monitoring
- Energy-saving technology
- Large platen size for versatile molding
- Robust construction for industrial durability

Certifications & Standards

Industrial Grade, High-Volume Ready
