

Injection Molding Machine

This injection molding machine is designed for precision and efficiency in plastic part manufacturing. It features a robust clamping unit with a high-speed injection system, ensuring consistent and accurate molding.

Overview

High-Performance Injection Molding Solution

The CSD-S180 is a high-performance injection molding machine engineered for precision and efficiency in plastic part manufacturing. It features a robust clamping unit paired with a high-speed injection system to ensure consistent, accurate molding results. Designed with modularity in mind, the machine offers flexible configuration options and simplified maintenance, making it a reliable choice for a wide range of materials and industrial applications.

Key Features

Core Advantages

High-Speed Injection, Robust Clamping, Modular Design, Process Monitoring, Precision Control

Technical Specifications

Performance Highlights

180 Tons

Clamping Force

System Capabilities

- Advanced process monitoring system
- High-speed injection unit
- Modular architecture for flexible configuration
- Easy maintenance access points

Model Identifier

CSD-S180
