

Injection Molding Machine

This machine offers a clamping unit that can match two different injection units. One injection unit is available with different screw diameters for injection capacity or specific pressure requirements, with four size screws available.

Overview

GEKW Series Injection Molding Machine

The GEKW series is a versatile injection molding solution designed for high-precision plastic manufacturing. It features a modular design where one clamping unit can be paired with two different injection units, allowing for customized configurations based on specific pressure or capacity requirements. With a variety of screw sizes and customizable L/D ratios, this machine is adaptable to diverse plastic materials and processing technologies.

Injection System

Customization

- Multiple L/D ratio screw options
- Interchangeable barrel configurations
- Dual injection unit compatibility

Available Screw Sizes

Size A, Size B, Size C, Size D
