

# Injection Molding Machine for Plastic Part Production

The YJW16000 series injection molding machine is a high-performance industrial machine designed for efficient and precise plastic part production. The advanced hydraulic system provides smooth and responsive control over injection speed and pressure, resulting in optimized cycle times and reduced material waste.

## Overview

### High-Performance Injection Molding

The YJW16000 series is a high-performance industrial injection molding machine engineered for precision and efficiency in plastic part production. Featuring a robust clamping unit and an advanced hydraulic system, it ensures consistent part dimensions and optimized cycle times while minimizing material waste. Its modular design and user-friendly control interface facilitate straightforward maintenance and process monitoring, making it a reliable solution for automotive, electronics, and consumer goods manufacturing.

## Technical Specifications

### Suitable Applications

- Automotive Parts
- Electronics Manufacturing
- Consumer Goods

Series	YJW16000
Key Features	High Clamping Force, Advanced Hydraulics, Modular Design, Precision Injection

## Performance Metrics

### Performance Highlights

<b>1 High</b> Clamping Consistency	<b>1 User-Friendly</b> Control Interface
