

Injection Molding Machine for Plastic Part Production

This injection molding machine is designed for efficient and precise plastic part production. Its features include a robust clamping unit, advanced hydraulic system, and user-friendly control interface.

Overview

High-Performance Injection Molding

This injection molding machine is engineered for efficient and precise plastic part production. It features a robust clamping unit and an advanced hydraulic system to ensure consistent quality and high throughput. Designed for versatility, it is ideal for a wide range of thermoplastic materials and industrial applications.

Technical Specifications

Model Identifier	K 320 M / CI970
Equipment Type	Injection Molding Machine
Suitable Materials	Thermoplastics

Key Features

Core Components

- Robust clamping unit
- Advanced hydraulic system
- User-friendly control interface
