

# Inline Duct Fan for Ventilation Systems

This inline duct fan is designed for ventilation systems. It features a galvanized steel housing for durability and corrosion resistance.

## Product Overview

### High-Efficiency Inline Duct Fan

This inline duct fan is engineered for high-performance ventilation in a wide range of environments, from residential to industrial settings. It features a robust galvanized steel housing, ensuring long-term durability and resistance to corrosion. The unit is equipped with a dynamically balanced impeller, which promotes efficient airflow while maintaining quiet operation for comfortable use.

## Construction & Design

Housing Material	Galvanized Steel
Impeller Design	Dynamically Balanced

## Applications

Suitable Applications	Residential, Commercial, Industrial
-----------------------	-------------------------------------

## Performance Features

### Key Performance Benefits

- Corrosion-resistant housing
- Quiet operation
- Efficient airflow dynamics
