

Insert Bearing Unit

Insert bearings are pre-assembled units that include a bearing, housing, and sealing system. These bearings are designed for simple installation on shafts and are suitable for a broad range of industrial uses.

Product Overview

Industrial Insert Bearing Units

Insert bearings, also known as bearing units, are pre-assembled components comprising a bearing, housing, and integrated sealing system. Designed for straightforward installation, these units are engineered to handle both radial and thrust loads effectively across a wide range of industrial applications. The robust housing provides essential support and protection, while the advanced sealing system ensures durability by preventing contaminants from entering the bearing assembly.

Technical Specifications

Load Handling

Radial Load • Thrust Load

Unit Components	Bearing, Housing, Sealing System
Installation Type	Pre-assembled for easy installation
Application Versatility	Yes
