

Insulated Deep Groove Ball Bearing

This is a high-performance insulated bearing designed for demanding applications. It prevents electrical current leakage and ensures reliable operation in electric motors and generators.

Product Overview

Insulated Deep Groove Ball Bearing

This high-performance insulated deep groove ball bearing is engineered for demanding industrial applications where electrical insulation is critical. Featuring robust construction and advanced insulation technology, it effectively prevents electrical current leakage to ensure reliable operation in electric motors and generators. Designed to withstand high loads, this component provides smooth and efficient performance for sensitive electrical equipment.

Technical Specifications

Model Number	6312-J20AA-C3
Bearing Type	Insulated Deep Groove Ball Bearing
Key Features	Insulated, High Load Capacity, Electrical Current Protection

Availability

Current Stock	18 pcs
