Overview

Insulated Foam Composite Truck Box

This insulated foam composite truck box is engineered for light-duty commercial applications where temperature stability is essential. Featuring a lightweight construction with advanced heat insulation properties, it minimizes internal temperature fluctuations caused by external conditions. The design incorporates durable color steel plates, foam insulation, and reinforced aluminum alloy framing to protect your cargo effectively.

Construction & Materials

Front/Side Panel Material	40mm color steel plate with white foam
Back Panel Material	17mm plastic steel board
Frame Structure	Aluminum alloy skeletons

Features & Hardware

Insulation Type

Heat Insulation • Temperature Control

Key Advantages

- Lightweight design
- High-temperature stability
- Durable construction

Door Lock

Stainless steel push lock
