

Insulated Slip Joint Pliers

These pliers are designed for gripping, bending, and cutting various materials. The slip joint allows for adjustable jaw openings to accommodate different sizes of objects, and insulated handles provide a secure grip while reducing the risk of electrical shock.

Product Overview

Professional Insulated Slip Joint Pliers

These general-purpose slip joint pliers are engineered for versatility in gripping, bending, and cutting tasks. Featuring an adjustable slip joint design, they easily accommodate various object sizes, making them an essential tool for diverse maintenance and repair applications. The integrated insulated handles provide both a secure, comfortable grip and critical protection when working in environments with potential electrical hazards.
