Overview

Integrated Combi Technology

This advanced integrated system combines bottle blowing, liquid filling, and capping processes into a single, highly efficient unit. Designed for versatility, it supports diverse beverage production including carbonated drinks, water, fruit juice, and tea. By utilizing online processing technology, the machine ensures stable transfer of preforms and bottles while achieving significant operational efficiency, including energy savings of 25% or more.

Capabilities

Process Integration

- Blowing
- Filling
- Capping

Supported Beverages

Carbonated Drinks, Water, Fruit Juice, Tea

Performance

Energy Savings

25 %

Energy Reduction

Operational Features

- Online blowing, filling, and capping
- Stable preform and bottle transfer
- Integrated process design
